

## Lands and Survey Series

The Lands and Survey (L&S) series was introduced by the Department of Lands and Survey in 1963 in response to the growing demand for customised products and services. While New Zealand Mapping Service (NZMS) continued to produce maps and charts primarily for public consumption, the L&S series was designed to cater for customised cartographic needs of other government departments, book publishers and individual customers. Consequently, the L&S series ‘took over’ the majority of map production previously falling under the Miscellaneous class of NZMS series. Internal forms, drawings and mapping requirements of the Department were also transferred to this new series.

Similarly to NZMS, L&S series products were given a unique number. The L&S series numbers range from L&S 1 to L&S 368; some include subseries identified by a letter (e.g. L&S 15A). Individual maps and charts within multi-sheet series are often identified by a bar and a consecutive numeral (e.g. L&S 37/8). Some L&S series share a series number with the NZMS series maps (e.g. the 2nd Edition of L&S 298 is also the 1st Edition of NZMS 304). Individual L&S series range from a single map to over a hundred sheets. Some maps published prior to the introduction of L&S series numbering system were allocated a series number retrospectively (e.g. L&S 1 – published from 1959). The L&S numbering system was discontinued from 1987, coinciding with the re-structure of the Department into Department of Survey and Land Information, although some maps were still added to the established series (e.g. L&S 352 - the most recent sheet from 1989).

There is no formal classification of L&S series maps and charts, however their scope and thematic variety can be appreciated by the name of the division that prepared them or that they were prepared for: Aeronautical, Antarctic, Cadastral, General, Topographical, or Town and Country Planning. Other divisions include Editing, Projects, Publicity, Reprographics and Servicing, highlighting the internal focus of some of the L&S series products.

The table overleaf lists all L&S series currently held in this repository, providing their generic title, scale and indicative publication dates or date ranges. The files are provided in JPG and TIF formats, with a selection of L&S series also available in a georeferenced GeoTIF format.

## About Cartographic and Geospatial Resources Repository

This developing repository of map images initially focuses on maps and charts published by the New Zealand Lands and Survey Department (later called Department of Survey and Land Information, and now Land Information New Zealand) since the 1850s. They are classified into three distinct groups:

- New Zealand Mapping Service (NZMS) series maps and charts
- **Land and Survey (L&S) series maps and charts**
- Topographic (Topo) series maps

In addition, the repository contains digital topographic databases for New Zealand and its offshore islands, Cook Islands, Niue, Tokelau and Ross Dependency in Antarctica produced by Land Information New Zealand since 2011 onwards:

- digital Topographic (Topo) data
